

What's new in Dragon[®] Dictate for Mac[®]

Powerful transcription. More control.
More accurate. Faster.

Dragon Dictate for Mac now includes the powerful capability to accurately transcribe an audio file of any single speaker's voice from podcasts or pre-recorded audio files. Great for transcribing college lectures, interviews, recorded notes...and more! You now get accurate and fast speech recognition, plus versatile transcription capabilities all in one.

Dragon Dictate for Mac is the ultimate productivity tool that enables you to save time and get more done. Dictate, edit, transcribe and control your computer all by using your voice. Dragon's accurate speech recognition, customizable capabilities, easy-to-use interface and full transcription flexibility means you get more done—at home, school or work—quickly and accurately.

Powerful transcription

- Accurately transcribe an audio file of any single speaker's voice from podcasts or pre-recorded audio files.
- Create transcription-only profiles to accurately transcribe based on recorded sources instead of requiring a live source.

- Only a 90-second audio clip is required to create a profile for the speaker
- Great for college lectures, interviews, business users with recorded notes...and more!
- Transcribe from many different formats, including .mp3 audio files
 - In addition to .aif .aiff .wav .mp4 .m4a .m4v
- Multiple transcription sources allowed within a profile so one user can easily manage different recordings
 - Expanded profile capability to allow multiple transcription sources per profile, making it even easier for one user to transition back and forth from personal dictation to one or more transcription files within the same project.
- Not only can you easily transcribe your own voice memos from a smartphone or portable voice recorder into text, but you can seamlessly mix and match

transcribing from other recording sources

- You can keep all the customization and vocabulary from your profile without having to switch out to a different profile

More control

- Compose and reply to emails in Gmail™ using full text controls, doing dictation and editing natively without having to transfer any text
- In Safari® and Firefox®, use voice commands to control your Gmail inbox, giving you even more voice capability within popular applications
 - Use your voice to click on any visible link

- User your voice to open emails

- Mix talking and typing with Full Text Control in Apple® Pages® 4.3

More accurate and faster

- Higher performance with drastically reduced latency and faster editing with pure 64-bit application and improved memory management capabilities
- Improved accuracy over version 3.x, with optimization for latest speech recognition technology
 - Best Match V technology
