

DICTATE AT THE **POINT OF CARE** WITH SMARTPHONES AND TABLETS

Dragon Medical 360 | Mobile Recorder

Smartphone Dictation into
 Dragon Medical 360 | eScripton and
 Dictaphone Enterprise Speech System

With Dragon® Medical 360 | Mobile Recorder, clinicians can use leading mobile devices such as iPhones®, iPads® or Android® phones or tablets to dictate at the point of care. Their high-quality audio recordings are then sent to a Nuance Healthcare background speech platform, enabling rapid and accurate documentation.

Clinicians using Dragon Medical 360 | Mobile Recorder save time when dictating, increase report accuracy, and improve document turnaround times. Furthermore, online app store and online market installation minimizes demand on IT resources.

HIGH-QUALITY DICTATION CAPTURE

Dragon Medical 360 | Mobile Recorder enables the convenience of dictating on iPhones or Android without sacrificing voice quality and accurate speech recognition processing. Dragon Medical 360 | Mobile Recorder was designed specifically to provide reliable mobile dictation capture to maximize the quality of background speech recognition, resulting in high quality drafts, high accuracy, and fast document turnaround time.

KEY BENEFITS

- Improves dictation access for busy clinicians
- Runs on leading mobile devices (iPhone, iPad, Android) and wirelessly uploads dictations
- Optimized for background speech recognition
- Reduces document turnaround time
- Reduces transcription errors
- Reduces documentation time
- Easy to install and setup software

KEY FEATURES

- Wi-Fi® and 3G/4G wireless connectivity
- High-quality dictation capture
- Touch screen dictation controls
- Outpatient schedule
- Dictation deficiency list
- Uses existing speech models
- HIPAA technical safeguards

OUTPATIENT SCHEDULE

Dictating from an appointment list saves documentation time and reduces demographic errors associated with manual data entry via telephone or computer keypads. Clinicians are presented with an up-to-date appointment list that also tracks their daily documentation. Tapping on an appointment initiates the dictation process and automatically associates key patient data with the dictation. Completed dictations are automatically removed from the list to simplify managing completed work. The outpatient schedule interfaces with your organization's existing centralized scheduling systems.

DICTATION DEFICIENCY

Dragon Medical 360 | Mobile Recorder alerts clinicians to late dictations to assist with turnaround time objectives. Administrators can set dictation time thresholds to trigger alerts for late dictations.

INSTANT WIRELESS UPLOADS

Unlike dedicated mobile dictation devices that require docking stations and introduce dictation upload delays, Dragon Medical 360 | Mobile Recorder instantly and wirelessly uploads dictations for background speech recognition. Dragon Medical 360 | Mobile Recorder uses industry standard Wi-Fi® and 3G/4G wireless networks.

EASY TO USE TOUCH SCREEN CONTROLS

Leveraging user-friendly smartphone and tablet designs, clinicians can access the touch-based interface to conveniently and efficiently create dictations. Clinicians select from a list of common worktypes, identify patients, control recording, and upload completed dictations with a touch of a finger. Dragon Medical 360 | Mobile Recorder has a simple and intuitive interface that requires minimal clinician training.

HIPAA TECHNICAL SAFEGUARDS

Locally saved dictations and data are protected with AES 128-bit encryption, and all dictations and data are transmitted over HTTPS using SSL.

Clinicians must log in to view data and dictate. An inactivity timeout ensures clinician and patient information is always protected.

USES EXISTING SPEECH MODELS

Using Dragon Medical 360 | Mobile Recorder will not disrupt existing background speech recognition or transcription processes. All existing speech models on the background speech recognition platforms remain in use. Your organization can expect the same levels of yield, productivity, and quality when adopting Dragon Medical 360 | Mobile Recorder as a dictation option for clinicians.

APP STORE INSTALLATION

Deployment and administration are easy with Dragon Medical 360 | Mobile Recorder. Clinicians can download and install software via their app store or online market, minimizing the IT resources required to deploy this software to your enterprise. Administrators can centrally manage user account permissions through EMon®, the Dragon Medical 360 | eScription™ administrative console, or Dictaphone® Enterprise System Admin Client.

ABOUT NUANCE HEALTHCARE

Nuance Healthcare, a division of Nuance Communications, is the market leader in creating clinical understanding solutions that drive smart, efficient decisions across healthcare. As the largest clinical documentation provider in the U.S., Nuance provides solutions and services that improve the entire clinical documentation process—from capture of the complete patient record to clinical documentation improvement, coding, compliance and appropriate reimbursement. More than 450,000 physicians and 10,000 healthcare facilities worldwide leverage Nuance's award-winning voice-enabled clinical documentation and analytics solutions to support the physician in any clinical workflow on any device.

To learn more about how Nuance Healthcare can help you improve financial performance, raise the quality of care, and increase clinician satisfaction, please contact us at 888-350-4836 or visit www.nuance.com/healthcare.
